Profile

Computer Science student passionate about DevOps and DevSecOps with hands-on experience building self-hosted CI/CD pipelines, GitOps workflows, and centralized logging systems. Experienced with Docker, Kubernetes, GitHub Actions, ELK Stack, and infrastructure automation through practical projects and an SOC internship.

Technical Skills

- Programming: Python, JavaScript, Bash
- Networking: TCP/IP, DNS, HTTP/S, SSH
- DevOps: Docker, Kubernetes, Git, GitHub Actions, Gitlab CI
- OS: Linux, Windows
- Cloud: AWS (Foundational)
- IaC: Ansible, Terraform
- Observability: ELK Stack, Prometheus, Grafana, Splunk

Work Experience

SOC Analyst Intern | PT. Sembilan Pilar Semesta Jul 2025 – Sep 2025

- Continuous Security Monitoring: Conducted real-time monitoring of security alerts using Stellar Cyber Open XDR, identifying potential threats across network, endpoint, and cloud environments.
- Incident Triage & Analysis: Analyzed and triaged security events to distinguish between false positives and legitimate incidents, ensuring high-fidelity alerting for the team.
- Escalation & Reporting: Responsible for the timely escalation of critical incidents to Tier 2 analysts, providing detailed technical summaries and initial investigation findings.
- Lifecycle Management: Managed the full incident lifecycle via a ticketing system, documenting investigative steps, root cause analysis, and remediation actions.

Projects

- Self-hosted DevSecOps & GitOps Pipeline — Built a self-hosted GitOps pipeline using GitHub Actions, SonarQube, Trivy, Docker, ArgoCD, Kubernetes, Prometheus, and Grafana to automate secure application delivery.
- Centralized Logging on Minimal Hardware (ELK) — Deployed Elasticsearch, Logstash, and Kibana via Docker Compose on 2 GB RAM VMs; shipped Nginx/SSH/system logs using Filebeat and Metricbeat for real-time monitoring and analysis.
- Containerized Python Web App (YT2MP3) — Dockerized a Flask app using yt-dlp and FFmpeg with proper volume/port mapping and Docker Compose, ensuring portable runtime and consistent dependency management.

Education

- Bina Sarana Informatika University | Bachelor of Computer Science 2024 – Present

Certification

- Getting Started with DevOps on AWS — Amazon Web Services (2026)
- AWS Cloud Builder Labs Learning Plan — Amazon Web Services (2026)
